

CLOUD TRANSFORMATION CONSULTANCY

KEY FEATURES

CLOUD TRANSFORMATION CONSULTANCY

Node4's deep-dive digital discovery tool. The first step in any digital transformation

At Node4 we don't like to work blind. Our guess is that you don't either. You want a rewarding affordable, disruption-free, efficient service. Without doubt, the best way to achieve that is with some prior preparation.

The only way to work towards digital transformation efficiently, to budget and with measurable effect is to base your work on real world data, regarding your current application environment.

That's why when you are at the start of your digital discovery journey, looking at how and what technology can optimise your business, this should be your first step.

Why?

It's practically impossible to plan the right budget and project plan for your business if you don't have a detailed view of your current environment and what changes will deliver most ROI. This affordable tool lays the foundation for a smooth transformation, planned on your very specific needs.

The deep-dive doesn't just measure capacity. It captures everything from physical power consumption and rack space through to processor, RAM and storage utilisation figures.

In many projects, there will still be physical migrations of hardware to co-location, alongside the collapsing of virtual infrastructure into IaaS, PaaS or hyperscale platforms such as Amazon AWS / S3 or Microsoft Azure.

"Our Consultancy work is built on detailed knowledge and data about your current digital environment. This tool makes that happen." Senior Consultant: hhdjkhf hkdjhdjkh

How?

We place an agentless tool into your environment in the form of a virtual appliance. We typically run data gathering for 34 days to capture month-end routines and their effect on the environment.

Throughout this process, our presales consultants will support you to ensure the correct operation of the tool and usable data is gathered. Once we have data, we can begin to group and analyse it. Based on this information and coupled with intelligence gathered by our consultants about your required outcomes, we can offer sound advice on a transformation strategy.

"Node4 has invested in technology which optimises consultancy time and offers our clients a totally transparent roadmap to digital transformation."

WHAT YOU CAN EXPECT

- ✔ Node4 will provide the virtual appliance and presales support to you to get it installed correctly – This is a simple unobtrusive process.
- ✔ Our presales consultant will check in with you after a few days to make sure data is appearing in the tool and draw some initial conclusions to support discussion.
- ✔ Key metrics will be charted and graphed to provide easy-to-understand figures.
- ✔ A full report will be generated and explained with advice which is relevant to support your business case. We will then work with you on decided strategies.

It is important to note for customers new to the service that Node4 do not directly install the data collector application. Node4 never has access to login credentials and is never able to see user data only performance and capacity metrics returned by the various system counters.
